Husch Blackwell served as development counsel for Jupiter Power, a leading developer and operator of energy storage infrastructure, in its recently closed $286 million project financing to support the construction of two standalone battery energy storage systems (BESS)—a Tibbits in Michigan, and Tidwell Prairie in Texas.

Husch Blackwell served as development counsel to Jupiter Power through the purchase, development, debt financing and funding, in the areas of real estate, environmental permitting, and state and federal regulatory, among others for the Tidwell Prairie Phase I project. We also assisted in obtaining Federal Energy Regulatory Commission approvals for the Tibbits project and are currently handling tax equity investments for both projects.

Jupiter Power's energy storage assets, which total 300 MW/800 MWh, are expected to commence commercial operations later this year.

The Husch Blackwell team was led by partners Cacki Jewart and Mashaal Bhaidani, and included Colton Harris, Sylvia Bartell, Erin McCready, Alaina Zermeno, Holly Heinrich, Leah Kaiser, Blake Hansen, and Mason Quiñones.

For further information, please refer to the March 18, 2025, Jupiter Power news release.
