

Information Governance

Successful organizations manage their information as a business asset, leveraging its strategic and operational value while satisfying legal requirements and controlling information-related exposures. Yet legal compliance and risk management can be complicated, especially given the rapid pace of technological and regulatory change.

Our Information Governance group brings its interdisciplinary legal and technology expertise to bear on challenges and opportunities involving compliant information governance, in the areas of:

- Records retention
- Information management
- Privacy and data security
- Litigation readiness and legal hold systems

Information Governance group members are experienced lawyers, information technology experts, and records management professionals at the forefront of their respective disciplines, with professional certifications and active involvement in AHIMA, AIIM, ARMA, CGOC, ICRM and the Sedona Conference. Our clients, including *Fortune* 100 and large privately-held companies, benefit from our collaborative, cross-disciplinary approach. They receive practical advice, cost-effective legal counsel, and reliable, defensible processes to help them manage their information opportunities and exposures.
